ANSWER OF 10

CVE IS A SCORE OF THE WEAKPOINT
CVSS IS A SCORING SYSTEM TO SCORE VULNEREBILITY

CVE-2014-0160, or Heartbleed, is a buffer over-read flaw where a server fails to validate the length of a "heartbeat" request, allowing an attacker to trick it into leaking 64KB of private memory containing encryption keys and passwords. The solution involves upgrading to OpenSSL 1.0.1g or newer to implement proper bounds checking, followed by revoking and regenerating all SSL certificates and user credentials potentially exposed during the vulnerability period. This demonstrates a critical failure in Input Validation, a core concept in your Web App Hacking and Cryptography modules.
